Διαθέσιμο

Water hardness is caused almost entirely by calcium and magnesium ion. Other di- and trivalent metals have a similar effect, but usually are not present in high enough concentration in potable waters to cause problems. Hardness increases soap consumption in laundries and causes scale in boilers. With the Model HA-71A test kit, simply count the number of drops required to change the solution color to determine hardness concentration. Utilizing drop count titration, this kit provides dual ranges and contains approximately 100 tests.

**Utilizes drop count titration - a simple, economical titration method**

**Kit contains all required reagents and apparatus in a rugged carrying case for analysis in the field**

### Προδιαγραφές

Smallest increment:	1 mg/L
	1 gpg
Αριθμός δοκιμών :	100
Βάρος :	2.5 kg
Εύρος μέτρησης :	1 - 20 mg/L & 17 - 342 mg/L CaCO <sub>3</sub>
Κατηγορία:	Drop Count Titration
Μοντέλο σετ μέτρησης :	HA-71A
Όνομα μεθόδου :	Drop count titration/ EDTA-powder pillows
Παράμετρος :	Hardness, total - As CaCO <sub>3</sub>
Τύπος θήκης :	D
